COMPANY OVERVIEW

Pro Prep and Fulfillment is a veteran-owned kitting, packaging, and fulfillment provider based in the central United States, servicing nationwide and global clients for nine years. The company builds, assembles, sorts, and warehouses multi-component product kits for commercial and e-commerce brands, run by a lean nine-person production team using a manufacturing-style, KPI-driven assembly line approach. Its capabilities translate directly to government kitting, repackaging, and physical distribution requirements that demand accuracy at scale.

CORE COMPETENCIES

- **Assembly, Kitting, and Multi-Component Bundling** – Line-balanced builds for kits with varied quantities, product types, and packaging, engineered to hold accuracy at high volume.
- **Sorting, Counting, and Lot/Expiration Tracking** – Component sorting by expiration date and lot code ahead of assembly, supporting traceability and shelf-life compliance.
- **Case Packing and Carton Assembly** – Box erection, component placement, sealing, unique unit labeling, and carrier hand-off run as a single production line.
- **Warehousing, Bulk Storage, and On-Demand Fulfillment** – Receives and securely stores client-owned inventory in bulk, then picks, packs, and ships individual orders as customer demand dictates, supporting strategically positioned and vendor-managed stock models.
- **Product Rebuild and Compliance Repackaging** – Mid-cycle packaging conversions, including new cartons and compliance labeling, executed with lot-code tracking without disrupting customer stock levels.
- **Scalable Fulfillment Throughput** – KPI-driven production lines (units per person per hour) that flex team size to volume, supporting rapid scale-up without service degradation.

DIFFERENTIATORS

- Structured root-cause quality process: every error is run through a full 5-Why analysis and closed with a hard countermeasure, not just a correction.
- \$2,000,000 bonding capacity, four times the value of the largest single project handled to date, leaving headroom to take on projects of varied complexity and size.
- Efficiency gains from KPI-driven line rebalancing grew throughput without adding headcount, opening capacity for new kit assembly customer and repack customer and shorter turnaround times.
- Team background spans military service, manufacturing, engineering, e-commerce, and food service, supporting fast adaptation across product types and build requirements.

RELEVANT COMMERCIAL EXPERIENCE

Assorted Snack Kit Assembly and Fulfillment

Client: Mid-Level Amazon Seller | Value: **\$552,000** | 2025

Received, sorted by expiration date, warehoused, and assembled fifteen-component private-label snack bundles end to end, including box erection, sealing, unique labeling, case-packing, and carrier hand-off. Averaged 6,500 bundles per month; raised per-person output from 22 to 33 units per hour through a manufacturing assembly-line approach, maintaining a less than 0.1% error rate throughout.

Compliance Packaging Rebuild (Carton and Warning-Label Retrofit)

Client: Latch Kit Seller | Value: **\$52,000** | May – July 2026

Rebuilt packaging for 16,000 stored units across a twenty-component kit, converting to new cartons with warning stickers under full lot-code tracking. Delivered 100% build accuracy and cut the originally estimated six-month timeline by 50% through KPI-driven throughput gains, keeping the customer in stock throughout the rebuild.
